When upgrading to the latest main gem <https://github.com/tors/jquery-fileupload-rails> the javascript no longer works

Uncaught TypeError: Cannot call method '_adjustMaxNumberOfFiles' of undefined

Reverting to the gem version specified in this example fixes it, I kept all other gem files static

@rschmitt - try this.

It turned out that all I had to do to get this example working and get rid of that error was changing this line

```
format.json { render json: [@upload.to_jq_upload].to_json, status: :created, location: @Upload }
```

to:

```
format.json { render json: {files: [@upload.to_jq_upload]}, status: :created, location: @Upload }
```

And I made the same thing on my app.

I, this change, putting files: [...], resolves the problem after the create, but I still can't see the ready for download files, the ones that we already uploaded. I can see by the log that they are saved, but never showned. I still get the error Uncaught TypeError: Cannot call method '_adjustMaxNumberOfFiles' of undefined.

any ideias?
