

Demo implementation

Sebastian Tschan edited this page on 15 Sep 2014 · 47 revisions

The [jQuery File Upload Demo](#) is hosted on GitHub, but the files are uploaded to [Google App Engine](#).

The uploaded files are publicly accessible, but without a public file listing nobody will see your test uploads, if you don't forward someone the rather cryptic download links.
Every file will be automatically deleted after 5 minutes, but might be longer accessible due to caching.

You can find the complete source code for the client ([GitHub Pages](#)) and server-side ([App Engine](#)) implementations in the [master](#) branch of this project (which is in sync with the [gh-pages](#) branch).
The App Engine source code is located in the [server/gae-python](#) and [server/gae-go](#) folders.
Originally, the demo had been built for the [Python runtime of Google App Engine](#), but it's since been rebuilt for the [Go Runtime Environment](#).

You can also find an example PHP based server-side implementation under the [server/php](#) folder that can be run on any typical PHP webhosting platform.

A [Node.js](#) implementation can be found under the [server/node](#) folder.

All implementations can be run in [cross-site](#) scenarios, which means the HTML pages can be hosted on a different domain than the upload handlers.
e.g. the App Engine demo runs on *jquery-file-upload.appspot.com*, while the upload form is hosted on *blueimp.github.com*.

All implementations support every available File Upload plugin option (see [Options](#) documentation), with the exception of non-multipart and chunked uploads, which have not been implemented for the Google App Engine and Node.js versions.
